Office Action Summary

Application No.

10/524,793

Applicant(s)

EVANS, KENNETH M.

Examiner

REBECCA FRITCHMAN

Art Unit

1797

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 April 2009.
2a) ☒ This action is **FINAL**. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22, 24, 25 and 27 is/are pending in the application.
4a) Of the above claim(s) 15-22, 24 and 25 is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-14, & 27 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☒ Information Disclosure Statement(s) (PTO/SB-08)
Paper No(s)/Mail Date _____
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____

***Detailed Action
Summary***

This is the Final Office action based on the 10/524793 application filed on 04/29/2009.

Claims 1-14, & 27 are pending and have been fully considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102(e) that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-6, & 9-14 are rejected under 35 U.S.C. 102(e) as being unpatentable over BUCHANAN in US 6604435.

With respect to Claim 1, BUCHANAN et al. teaches of a method of flow cytometry which focuses on sorting delicate cells, especially living sperm cells(which are obviously from male species of mammals)(column 1, lines 11-18). BUCHANAN et al. also teach injecting fluid into a ribbon flow through an injection point (column 8, line 62-67 & column 9, lines 1-9). In addition to that, BUCHANAN et al also teaches of a liquid flow cytometer system where a sample is processed into individual droplets prior to being analyzed and sorted (column 5, lines 26-31). Also, BUCHANAN et al. teach of

sorting sperm containing drops by the sorting device(obviously two or more groups)(column 10, lines 33-37) and of adjusting the injection point(from 6mm to 10 mm or greater)(column 9, lines 1-32).

With respect to Claim 2, BUCHANAN et al. teaches of the use of bovine and equine sperm cells which have been stained and sorted by their DNA content (column 15, lines 5-10).

With respect to Claim 3, BUCHANAN et al. teaches of the sample stream being drawn into a thin ribbon by the sheath fluid (column 6, lines 36-37).

With respect to Claim 4, BUCHANAN et al. teaches of sperm cells being buffered in specifically prepared sperm compatible buffer (column 10, lines 41-44). Citrate, phosphate, and HEPES buffer are all well known in the art and would have been obvious to use.

With respect to Claim 5, BUCHANAN et al. teaches of obtaining sperm cells of the male and female bovine and equine species wherein the step of injecting sperm cells into the sheath fluid comprises injecting sperm cells from the selected groups into the sheath fluid at an injection point (Claim 10 & 17). It is inherent to inject the sperm cells of the first and second species at different injection points.

With respect to Claim 6, BUCHANAN et al. teach of adjusting the injection point by use of a beveled tip where by the preferred amount of beveling is 4 degrees(column 6, lines 40-67, column 7, lines 1-27).

With respect to Claim 9, BUCHANAN et al. teaches of adjusting the injection point by use of a beveled tip where by the preferred amount of beveling is 4

degrees(column 6, lines 40-67, column 7, lines 1-27). BUCHANAN et al. also teaches of varying the size of the nozzle, height and the diameter(column 7, lines 9-15) through which the distance between injection points of the sperm cells into the fluid stream would be altered.

With respect to Claim 10, BUCHANAN et al. teaches of adjusting the injection point by use of a beveled tip where by the preferred amount of beveling is 4 degrees(4 degrees is the optimum for preferred stream resolution)(column 6, lines 40-67, column 7, lines 1-27). BUCHANAN et al. also teaches of varying the size of the nozzle, height and the diameter (column 7, lines 9-15) through which the distance between injection point of the sperm cells into the fluid stream would be altered.

With respect to Claim 11, BUCHANAN et al. teach of adjusting the injection point by use of a beveled tip where by the preferred amount of beveling is 4 degrees(4 degrees is the optimum for preferred stream resolution)(column 6, lines 40-67, column 7, lines 1-27). BUCHANAN et al. also teach of the sample stream being drawn into a thin ribbon(due to the beveling) by the sheath fluid, the resulting change in flow condition causing a corresponding orientation of the sample material (column 6, lines 35-39).

With respect to Claim 12, BUCHANAN et al. teach of et al. teach of adjusting the injection point by use of a beveled tip where by the preferred amount of beveling is 4 degrees(4 degrees is the optimum for preferred stream resolution)(column 6, lines 40-67, column 7, lines 1-27). BUCHANAN et al. also teach of the sample stream being drawn into a thin ribbon(due to the beveling) by the sheath fluid, the resulting change in

flow condition causing a corresponding orientation of the sample material (column 6, lines 35-39).

With respect to Claim 13, BUCHANAN et al. teaches of sorting delicate cells, especially sperm cells (column 1, lines 16-17).

With respect to Claim 14, BUCHANAN et al. teaches of sorting delicate cells, especially sperm cells (column 1, lines 16-17). BUCHANAN et al. also teaches of the sperm containing drops being sorted by the sorting device and collected by the sperm-compatible collecting system wherein the X or Y chromosome bearing sperm may be used for insemination(column 10, lines 50-57).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 7, 8, & 37 are rejected under 35 U.S.C. 103(a) as being obvious over BUCHANAN in US 6604435 and in further view of NEWTON in US 6230982.

BUCHANAN et al. teach of a low acceleration method of flow cytometry.

BUCHANAN et al. do not teach of the slidable adjustment of a slidly adjustable coupling between the particle injector and the nozzle body part.

With respect to Claim 7, NEWTON teaches of an adjustable valve for varying the position of injection into a flowing liquid stream, slidably adjusting the position of the valve with respect to the center of the stream (Claim 29). It would have been obvious to modify the method of flow cytometry of BUCHANAN by using the adjustable, slidable fluid dispensing vale of NEWTON in order to adjust the inlet of the cells within the carrier fluid to minimize backflow which results in unwanted contamination of dispersing fluids (NEWTON, column 1, lines 19-23).

With respect to Claim 7, NEWTON teaches of slidably adjusting the position of the valve with respect to the center of the stream (Claim 29).

With respect to Claim 37, Examiner takes notice of the equivalence of a slidably adjustable valve(slidable engagement between particle injector and nozzle body) to a key stop mated with a nozzle body in adjusting, slectively and variably the injection point. This is also evidenced in applicants arguments dated 04/29/2009,(page 1, paragraph 2).

Response to Arguments

Applicant's arguments filed 04/29/2009 have been fully considered but they are not persuasive. Applicant claims in Claim 1 "selectably variably adjusting the injection point of said cells". Examiner maintains the position that "selectably, variably" is not further limiting upon the word "adjusting" and therefore the BUCHANAN still reads on the claimed invention. BUCHANAN et al. teach of sorting sperm containing drops by the sorting device (obviously two or more groups) (column 10, lines 33-37) and of adjusting the injection point (from 6mm to 10 mm or greater)(column 9, lines 1-32). It

appears to the examiner that the applicant means to claim a "built in adjustment feature". This however is not claimed & upon further ammendment allowance would be pending upon further search.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to REBECCA FRITCHMAN whose telephone number is (571)270-5542. The examiner can normally be reached on Monday- Friday 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim, Vickie can be reached on 571-272-0579. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
